SuperinG™

Magnet, Tourmaline and Germanium

These 3 materials will constantly provide your penis with amazing benefits. superinG™ is simply worn at the bottom of your penis just like you wear a ring on your finger.

These materials work by drastically improving the condition of blood inside your penis. Your penis health is as good as the blood health inside it. It's that simple and superinG™ combines these three elements into one simple to wear adjustable ring. The result is powerful penis enhancement.

How it Works

The first benefit comes from the magnet. superinG™ contains a strong rare earth magnet that creates a magnetic field around the base of your penis where the blood enters. When blood flows through this

magnetic field, The iron in the blood cells is effected by the magnetic field causing the blood cells to spin and separate as they enter the penis. The cell separation gives each cell more surface area to carry much more oxygen and vital nutrients to your penis.

The second benefit comes from Tourmaline and Germanium which emit negative ions and Far Infra-Red Rays. Negative ions work to neutralize acidic levels in the bloodstream while Far Infra-Red Rays cleanse and increase the production of cells inside your penis.

Why SuperinG™?

As we age, eat less than perfect foods, smoke, drink, overwork and just deal with the stress of daily life, our bodies in general and our penises specifically begin to suffer. Did you know that as we age our penises begin to shrink in size?!

The question is how do we make sure that our penises stay healthy and strong and even grow bigger and better? We have to answer that question. We have to because our self esteem depends on it. Our happiness depends on it. Our relationships depend on it.

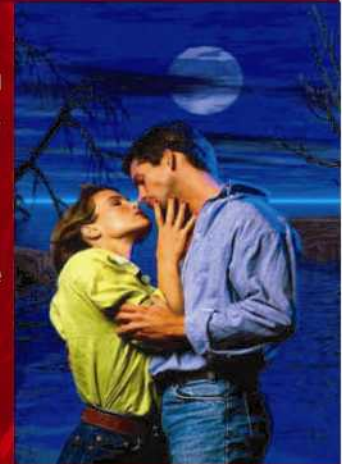

To answer that question, we have to know: what makes a penis get hard and stay hard? and what feeds it and nourishes it? The answer is BLOOD. When you have an erection, it's just blood flowing into your penis causing it to expand. Improve the blood flowing into your penis and you will have a new bigger, stronger and healthier penis.

Blood doesn't only act as filler, it carries with it the oxygen and necessary foods your penis needs to grow and be healthy.

SuperinG™

If the blood cells you let in were more clean, separated and organized, your penis will receive all it needs to grow healthier and stronger. AND if you could pump more and more healthy blood into your penis, your penis will expand and mushroom even more.

That's what superinG™ does for your penis. It improves the blood flow in your penis. It's light weight and you won't even feel like your wearing it. It's simple, comfortable, affordable and most importantly: It works!

A great Alternative

Today's penis enhancement market is full of expensive unsafe pills along with complicated devices. There's no need for popping all those expensive pills or wearing those uncomfortable awkward devices. superinG offers a very simple, affordable and effective solution to your penis' needs. All you have to do is wear it like you wear a ring around your finger.

Facts

"More than 300 research teams around the world, at institutions as prestigious and mainstream as Imperial College London, and California, Yale and Harvard universities, have found evidence of positive effects!"

Professional Athletes and celebrities use magnets. There are even NASA Astronauts that use magnets to improve their health.

From Robert Holcomb, MD, Assistant Professor of Neurology at Vanderbilt University Medical Center: "This is not magic, there is nothing mystical about this... We have tested magnets on more than 5,000 patients and there is absolutely no doubt the treatment works!"

Testimonials

"I'm one from the army of SuperinG™ satisfied customers (I'm sure). Just two months passed since I bought it, but I have already felt the difference."
